Job Summary

Under close supervision, performs highly routine experiments for process or R & D Engineering. Records and reports results. Reviews rejected production runs. Performs basic set up of equipment and audits the work of lie operators for accuracy. Reports discrepancies to engineering. Assist with monitoring the assembly/molding process by troubleshooting problem processes and assisting with identifying quality issues.
Essential Duties & Responsibilities

Tends automatic or semiautomatic machines and related equipment in a continuous production/processing operation.
Follows production/process specifications or instructions of higher level technical personnel.
May be responsible for mold set-ups and line clearance.
Monitors material gauges, valves, ratios, temperatures, pressures, and related controls and guidelines to ensure adherence to production/process specifications.
